

Pool Pump MiniVISE with High-Efficiency Inverter Motor 0.6 kW

NEW

Quieter, smarter, and more energy-efficient – for sustainable and worry-free operation

Pahlén's new MiniVISE circulation pump builds on the 10-year success of the EcoVISE and takes performance to the next level. With intelligent variable speed control, ultra-quiet operation, and a built-in timer function, MiniVISE combines energy efficiency with optimal user-friendliness.

MiniVISE features an intuitive digital touchscreen, is powered by a high-performance inverter motor, and can be installed 1.5 meters above the water level. With a sound level of only 44 dBA at 60% capacity, this is our quietest pump to date – as quiet as a modern refrigerator.

For maximum installation flexibility, even in tight spaces, the inlet position can be adjusted in seven steps. The pre-filter, made from durable thermoplastic, has a transparent and easily removable lid, making it simple to inspect and clean the strainer basket.

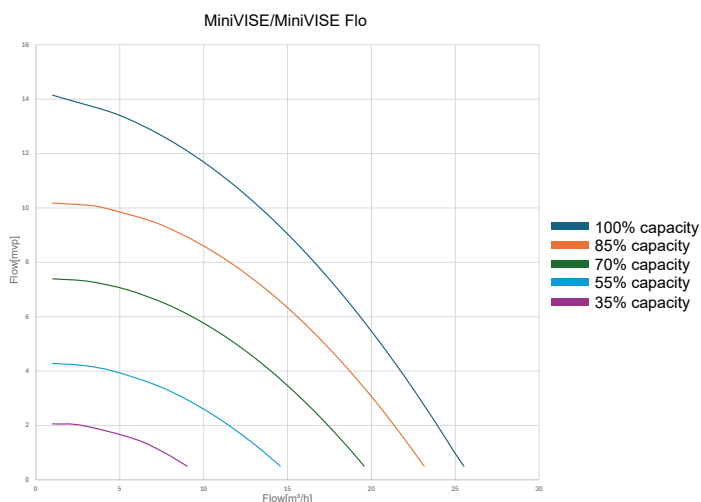

MiniVISE – designed for those who value performance, quiet operation, and reliable circulation, season after season.

MiniVISE Flo excl. pre-filter

Pumps without pre-filters are suitable for various purposes. For example Jet Massage, waterfalls, fountains etc.

Features

- High-quality brushless inverter motor
- Digital display
- Can be installed 1.5 m above water level
- 3 preset speed programs
- External speed control available as accessory
- Built-in timer function (day/night mode)
- Maximum energy savings and ultra-quiet operation
- Noise level: 54 dB
- Adjustable inlet position
- Pre-filter lid with one-hand grip
- External control option (e.g., Aseko)
- Suitable for pools up to approx. 50 cubic meters
